DETAILED ACTION

Allowable Subject Matter

1. Claims 1- 23 are allowed.

The present invention is directed to an information processing apparatus adapted to execute a sequence of processing operations for recording video data recorded to a first recording medium in a first format to a second recording medium in a second format, without user's manual intervention. The independent **claims 1, 15 and 17** identify uniquely distinct features "setting means reduces the audio data bit rate from an original audio data bit rate to a reduced audio data bit rate without reducing the moving image bit rate if a resulting original amount of data for original audio and moving image bit rates exceeds the capacity of the predetermined removable recording medium". The closest prior art U.S. Patent 5,835,668 to Yanagihara, U.S. Patent 5,793,927 to Lane and U.S. Patent Pub. 2002/0054754 A1 to Kikuchi et al., disclose recording apparatuses that record audio/video data, either singularly or in combination, fail to anticipate or render the above under underlined limitations obvious.
